Security Dimensions

managed security services

v3^d

Security Dimensions is a range of managed services designed to provide organisations with a hassle-free and low entry cost solution to their security needs. A range of services are available, designed to precisely match your technical, performance and budgetary requirements; managed firewall services: e1^d, e2^d and e3^d and vulnerability scanning services: v1^d, v2^d and v3^d.

The v3^d Monthly Vulnerability Scanning Service is a risk assessment service that scans your IP network for security holes which, if not fixed, could become serious threats to your company's network security. By the application of regular scanning you can rest assured that your network is constantly updated against constantly changing security threats.

Benefits

Vulnerabilities provide a doorway for the hacker, cracker, or script kiddy to penetrate your front door. Vulnerability testing helps identify those doorways, and provides advice on how to lock out those unwanted visitors. Key benefits include:
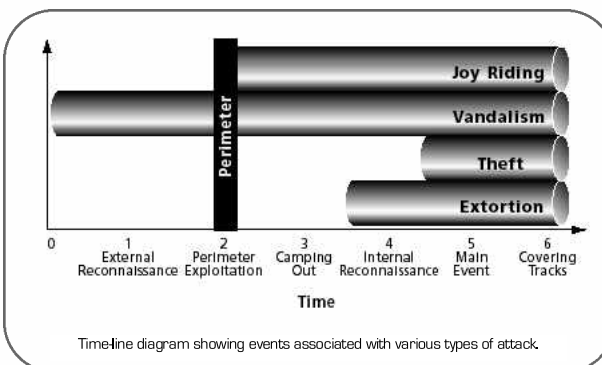

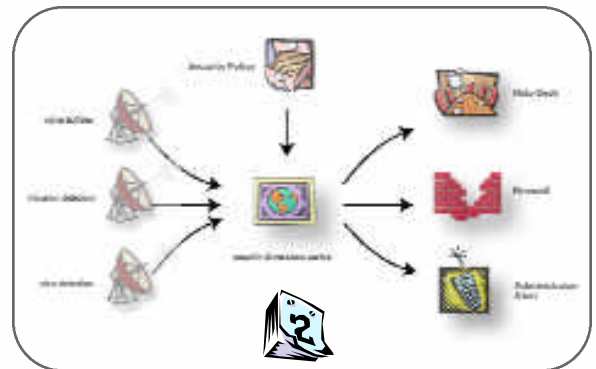

- Locate security vulnerabilities and open holes in servers and network to assist in the identification of potential areas of attack

- Scanning for hundreds of vulnerabilities, tool sets are continually updated to reflect new and constantly changing threats

- Lowers the risk of malicious security breaches

Time-line diagram showing events associated with various types of attack.

- Comprehensive vulnerability report with recommendations

- All tests are performed and reviewed by experienced security consultants

- Direct access to the security consultant aids in true understanding of the real security threats faced by the organisation

Security Dimensions is brought to you from Networks Unlimited who, since 1992, have provided thousands of organisations with specialist Internet Security, Network Management and Web Solutions.

With hundreds of firewall and VPN installations to our name and endorsed by some of the leading vendors in the industry, your future security is safe in our hands.

Service Provision

The v3^d vulnerability scanning service includes the following:

⇨ Full monthly external vulnerability scans of up to 64 specified IP addresses

⇨ Identification and classification of (high, medium, low) security weaknesses with fixes

⇨ Full report with conclusions and recommendations e-mailed to designated contact or hosted via the web

⇨ Plus - One telephone consultative session with security consultant to review report

⇨ Plus - e-mail access to our knowledge base service for additional advice

Pricing

Up to 64 IP addresses, monthly off-site (external) network scans.................£ 6000

65+ IP addresses.............................£ POA

⇨ Options:

- CHAM (destructive) penetration testing: per IP address......................£ 250

- Additional telephone consultative sessions: per session..........................£ 150

- In depth on-site security sessions: per day.................................£ 1500

Please Note

Customer must specify required number of addresses to be scanned up to a maximum CHAM testing is designed to simulate the activity of a live hacker and is potentially destructive in nature. The customer must be aware of this fact when specifying this option, as Networks Unlimited cannot be held responsible for any loss of data or service.
